

20-point home work #5

Due in 2 weeks

2-pages, ensure all members of your team are listed on the top of the first page

Look up and write a short description about Love Canal and two other Super Fund cleanup projects: Find what chemical/chemicals caused the environmental hazards, how they came to be in the area, and what steps were taken to mitigate the hazards. In your own words describe what steps you would take if you were working in one of the industries responsible for these environmental disasters to ensure that this sort of problem did not happen while still allowing your company/industry to function.
